## 289 incidences of Lyme disease have been reported around Alpharetta.

- LEGEND**
- ⊕ Hamby Road Animal Hospital
  - Incidences within 30 miles: 66
  - Incidences within 60 miles: 289
  - Counties with Lyme disease
  - Incidences unknown

Reported positives from over 5,000 veterinary clinics, telephone surveys and IDEXX Reference Laboratories results. To determine Lyme prevalence in your clinic, please call 1-800-691-8052.

# Tick season is here!

Now, an effective way to detect and manage Lyme disease infection.

## Introducing the New Two-Tiered Approach to Lyme Disease:

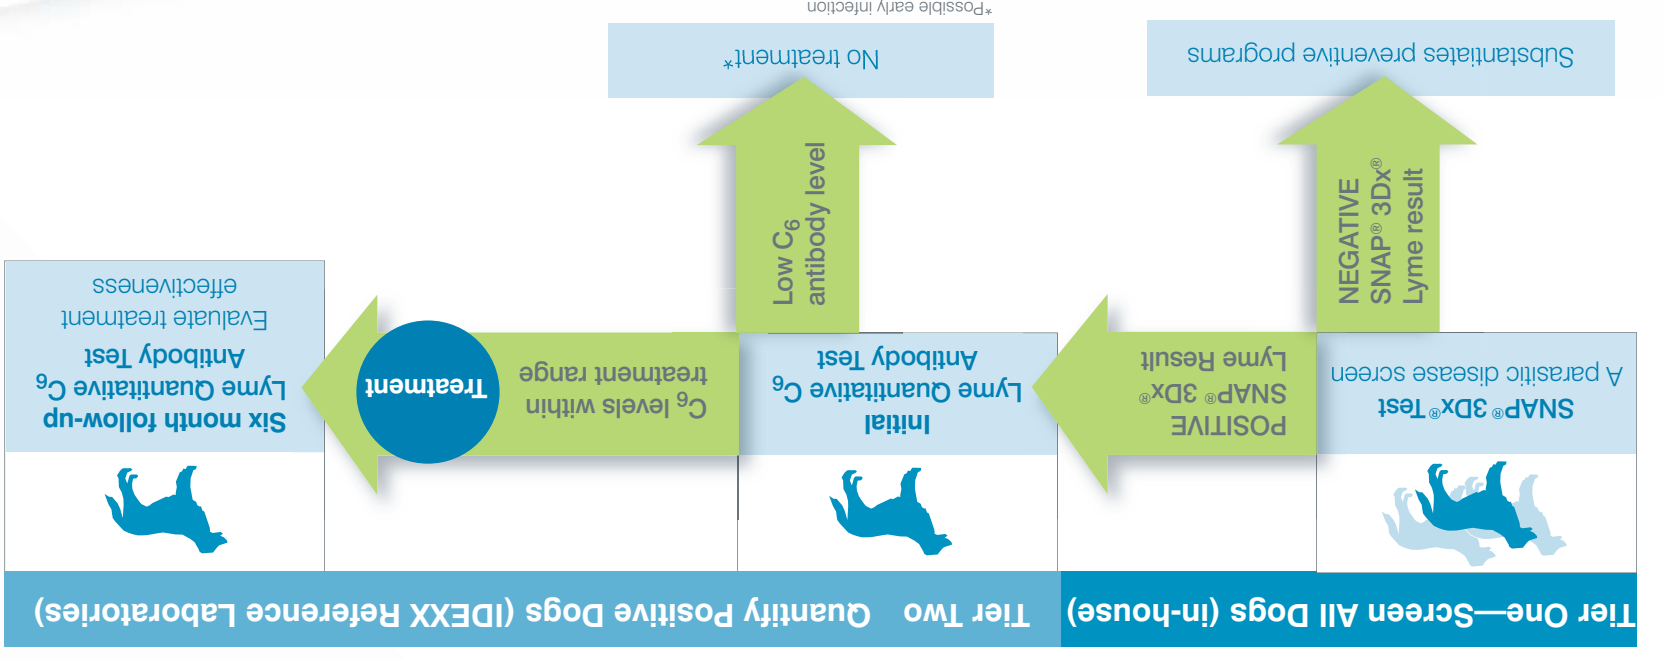

**Tier One** Screen all dogs in-house with the SNAP® 3Dx® Test to detect Lyme infection.

### The SNAP® 3Dx® Assay:

- Tests for three diseases (heartworm, *E. canis*, Lyme)
- Delivers accurate results in 8 minutes
- Does not cross-react with vaccination, unlike traditional Lyme tests, such as the Lyme IFA titer test.

**Tier Two** Quantify infection levels and evaluate treatment effectiveness.

The new Lyme Quantitative C<sub>6</sub> Antibody Test provides measurable insights to monitor response to treatment—the Lyme Western blot test does not.

## CASE

**Wilbur**

Four-year-old male beagle

**Signs**

Healthy appearance

**Clinical Presentation**

Routine exam

“With the SNAP® 3Dx® Test, we found that Wilbur was... positive for Lyme disease. We followed up with the Lyme Quantitative C<sub>6</sub> Test... It was high, 120 U/mL. We treated the dog. When we checked antibody levels six months later, they had dropped significantly to 50 U/mL. We believe that Wilbur has been successfully treated.”

Dr. Mike Shimon • Wauwatosa Veterinary Clinic • Wauwatosa, Wisconsin
